FOR YOUR SAFETY
If you smell gas:
1. Open windows.
2. DO NOT try to light any appliance.
3. DO NOT use electrical switches.
4. DO NOT use any telephone in your building.
5. Leave the building.
6. Immediately call your local gas supplier after leaving the building. Follow the gas supplier’s instructions.
7. If you cannot reach your gas supplier, call the Fire Department.

**WARNING**

Fire Hazard
Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

Some objects will catch fire or explode when placed close to heater.

Failure to follow these instructions can result in death, injury or property damage.

**WARNING**

Improper installation, adjustment, alteration, service or maintenance can result in death, injury or property damage. Read the Installation, Operation and Service Manual thoroughly before installing or servicing this equipment.

Installation must be done by a contractor qualified in the installation and service of gas-fired heating equipment or your gas supplier.

SECTION 1: BEFORE YOU BEGIN

Thank you for purchasing a ROBERTS GORDON® heating product. We are pleased you have chosen the CGTH Series overhead tube heater. In addition to the quality you receive from our company, you also receive over 30 years of infrared heating experience.

For years of trouble-free operation from your heater, carefully read this Use & Care Manual. This Manual contains valuable information to help you use the heater safely and properly.

To obtain warranty service, please complete and mail the Owner Warranty Registration Card found on the last page of this manual. In addition to activating your warranty, registering your heater enables us to contact you with safety and product updates.

Keep this manual in a safe place in case you have any questions or require service in the future. Also, since proof of purchase is required to obtain warranty coverage, keep the original sales receipt in a safe place. Remember to record the model and serial numbers of your heater below. Model and serial numbers are found on the rating tag affixed to the heater. See Page 10 for rating tag location.

1.1 Read This Manual

Read this manual carefully before installing or servicing this equipment. Improper installation, servicing or maintenance can result in death, injury or property damage. Check the required safe distances from combustibles given on the outside of each burner to make sure that the product is suitable for your application. The required safe distances from combustibles are also found on Pages 9 and 10 of this manual. Installer must be a contractor qualified in the installation and service of gas-fired heating equipment. After the installation is complete, check product operation as provided in these instructions.

1.2 Questions, Comments or Suggestions

Please direct any questions, comments or suggestions to:

Roberts-Gordon, LLC
1250 William Street
P.O. Box 44
Buffalo, New York 14240-0044
Telephone: 716.852.4400
Fax: 716.852.0854
Toll Free: 800.828.7450
SECTION 2: HEATER SAFETY

Your Safety is Important to Us!
This symbol is used throughout the manual to notify you of possible fire, electrical or burn hazards. Please pay special attention when reading and following the warnings in these sections.

Installation, Service and Annual Inspection of heater must be done by a contractor qualified in the installation and service of gas-fired heating equipment.

⚠️ WARNING

Read this manual carefully before using the heater.
Plug the heater into a grounded three-prong ceiling outlet.

Do not install or service any part of the heater. Installation must be done by a contractor qualified in the installation and service of gas-fired heating equipment or your gas supplier.

Installer must exhaust heater outside.

Keep all persons, especially children, away from the heater.

Keep the heater out of the weather. The heater is for indoor areas such as residential garages, workshops, hobby greenhouses, small warehouses, service centers or lobbies. Do not use the heater in living or sleeping areas such as a bedroom or basement.

⚠️ CAUTION

Do not use heater in an area containing corrosive chemicals.

Avoid the use of corrosive chemicals to ensure a longer life of the burner, tubing and other parts.

Failure to follow these instructions can result in property damage.
SECTION 3: INTRODUCTION

3.1 About Roberts-Gordon

Roberts-Gordon pioneered low-intensity infrared heating systems in 1962 with the introduction of its revolutionary custom-engineered CORAYVAC® system. After more than 40 years of infrared expertise in commercial and industrial applications, Roberts-Gordon now offers the CGTH-Series heater for use in residential garages and light industrial/commercial applications.

3.2 About the Heater

The CGTH-Series is a factory-assembled, gas-fired, low-intensity heating system that incorporates a balanced flue. The system has been designed for easy installation and will provide years of economical operation and trouble-free service. Not only is infrared heat efficient, it also provides the most comfortable conditions in open areas, such as garages.

Gas-Fired means it uses clean-burning natural or LP gas.

Low-Intensity means that the radiant surface of the tube does not glow red. Instead, it operates at a lower temperature (less than 1000°F) and radiates energy at a lower intensity per square foot of radiating surface. The lower temperature and intensity levels are within a range that is most effective in establishing and maintaining personal comfort levels. An aluminum reflector directs the radiant energy downward to the occupied area.

Balanced Flue means that the burner draws combustion air from outdoors and exhausts the products of combustion, also to the outdoors, through a shared opening. This is accomplished through two concentric tubes.

Radiant refers to the energy radiated by the CGTH-Series heater. Because the energy is in the form of infrared rays, it does not directly heat the air. Instead, the rays heat objects such as the floor, cars, machines and people. The warm objects, in turn, heat the air.

These combined features are the key to the exceptional comfort and fuel efficiency provided by the CGTH-Series heater.

3.3 Unpacking the Heater

3.3.1 Manpower Requirements

To prevent personal injury and damage to the heater, two persons will be required to remove the heater from the carton. Both ends of the heater should be lifted from the carton at the same time. The burner should be lifted by gripping the bottom. The reflector of the heater should be lifted using the hanger.

3.3.2 Safety

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cut Hazard</td>
</tr>
<tr>
<td>Wear protective gloves when handling aluminum reflectors.</td>
</tr>
<tr>
<td>Edges are sharp.</td>
</tr>
<tr>
<td>Failure to follow these instructions can result in injury.</td>
</tr>
</tbody>
</table>

Thin sheet metal parts, such as the reflector portion of the heater and the various venting components, have sharp edges. To prevent injury, the use of work gloves is recommended. The use of gloves will also prevent the transfer of body oils from the hands to the surface of the reflector.
3.4 Components Identification

**FIGURE 1: Components Identification**

- **Burner** - Contains the electrical components (i.e., blower motor, power transformer, etc.) and gas distribution components (i.e., gas valve, etc.) that make the heater work. There are no owner serviceable items contained in this box.

- **Front Fixed Hanger** - Provides rigid support and mounting surface for the reflector. Holes are provided in the upper corners of the bulkhead to accommodate suspension hardware required for installation of the heater.

- **Reflector** - The reflector is made from formed aluminum and reflects the radiant energy downward, bathing people and objects below.

- **Heat Exchanger** - A U-shaped tube through which the heated products of combustion pass.

- **Rear Movable Hanger** - Provides support for the tube and reflector at the end that is furthest from the burner. The support may be moved (within limits) to accommodate hanging of the unit.

- **Service Door** - To be removed only by a contractor qualified in the installation and service of gas-fired heating equipment or your gas supplier. Removal of this service door provides access to the electrical and gas distribution components.

- **Gas Line** - Must only be installed and serviced by a licensed contractor or gas fitter.

- **Wall Termination Plate** - Placed on the outside wall over the venting.

- **Venting** - Installer must properly exhaust the heater outside. The 5” outer duct carries fresh air to the burner. The 3” inner duct carries the products of combustion to the outside.

- **Thermostat** - 24 Volt Thermostat mounted with Safety Tag.

- **Protective Grille** - Included with select models. See Page 13, Section 5.2 for details.

- **Vent Collar** - Accommodates a 5” (125 mm) diameter combustion air inlet duct that delivers fresh air to the burner. The fresh air enters the burner through the twelve equally spaced holes shown above. The 3” (80 mm) diameter hole in the center of the flue collar accommodates the venting duct that carries the products of combustion to be vented outdoors.

- **Nipple-3/8” (10 mm) NPT** - Point at which the gas supply is connected to the heater.
Thermostat Connection - Two terminals to which the thermostat wires will be connected.

Power Cord - Includes a three-prong plug that must be connected to a dedicated and properly grounded three-prong ceiling outlet.

3.5 Where Can the Heater Be Installed?
The CGTH-Series heater is intended for installation in the following areas:

- Residential applications, such as:
  - garages
  - hobby greenhouses
  - workshops

- Light industrial/commercial applications, such as:
  - entranceways
  - lobby areas
  - lunch rooms
  - aircraft hangars (See Page 7, Section 4.5.1 for restrictions)
  - public garages (See Page 7, Section 4.5.2 for restrictions)

3.6 Where Can’t the Heater Be Installed?
The CGTH-Series heater is not intended for installation in the following areas:

- Residential living or sleeping areas
- Basements

Due to high temperatures, ensure that the heater area is kept clear of furniture, draperies, clothing or other combustible materials. Children and adults should be alerted to the hazard of high surface temperatures and should stay away to avoid burns and clothing ignition. Young children should be carefully supervised when they are in the same room as the heater.

3.7 Installer’s Responsibility

The CGTH-Series heater, the gas and electrical supplies, as well as the venting, must be installed in accordance with applicable specifications and codes. Only firms (or individuals) well qualified in this type of work should install the system. Consult local Building Inspectors, Fire Marshals or your local ROBERTS GORDON® independent distributor for guidance.

Use the information given in this manual together with the cited codes and regulations to perform the installation. The heater must be installed in accordance with the Minimum Required Safe Distance from Combustibles and must be vented outside. If any aspects of the installation are unclear, consult your ROBERTS GORDON® independent distributor for clarification. The installer must furnish all needed materials that are not furnished as standard equipment. It is also the installer’s responsibility to see that the materials and installation methods used result in a job that is workmanlike in appearance and is in compliance with the requirements of this manual. The installer must give this manual and the Installation, Operation and Service Manual to the owner.
SECTION 4: BEFORE USING THE HEATER

The following information is included in the Installation Manual and applies to the installer at the time of installation. The warnings are included on the product. Because your safety is important to us, we include these warnings for your information. If you find your heater is not installed according to these warnings and codes, immediately contact the installer.

4.1 System Requirements

This section provides the following information:

- Defines the gas, electric and venting requirements for the CGTH-Series heater.
- Specifies the national standards and applicable codes that apply to the gas, electric and venting requirements.
- Specifies the national standards and applicable codes that apply to non-residential installations.

4.2 Gas Service Requirements:

**Inlet Connection:** 3/8" Male NPT

**Inlet Pressure**

- **Natural Gas:** Minimum 5.0" wc  
  Maximum 14.0" wc
- **LP Gas (Propane):** Minimum 11.0" wc  
  Maximum 14.0" wc

**Manifold Pressure**

- **Natural Gas:** 3.5" wc
- **LP Gas (Propane):** 10.5" wc

4.2.1 Gas Type

The type of gas appearing on the nameplate must be the type of gas used. Installation must comply with local codes and recommendations of the local gas company. United States: Refer to National Fuel Gas Code, ANSI Z223.1 - latest revision (same as NFPA 54). Canada: Refer to CSA B149.1 Natural Gas and Propane Installation Code.

4.2.2 Gas Supply Lines

The size of the gas supply lines must comply with local codes and recommendations of the local gas company. United States: Refer to National Fuel Gas Code, ANSI Z223.1 - latest revision (same as NFPA 54). Canada: Refer to CSA B149.1 Natural Gas and Propane Installation Code.

A 1/8" NPT plugged tap must be installed in the gas line connection immediately upstream of the burner that is farthest from the gas supply meter. The tap is required for checking system gas pressure.

4.2.3 Meter and Service

Meter and service must be large enough to handle all the heaters being installed plus any other connected load. The gas line which feeds the system must be large enough to supply the required gas with a maximum pressure drop of 1/2" wc. When gas piping is not included in the layout drawing, the local gas supplier will usually help in planning the gas piping.

4.3 Electrical Service Requirements

**WARNING**

Electrical Shock Hazard
Plug heater into grounded three-prong ceiling receptacle. Do not cut or remove the grounding prong from this plug. Do not use with an extension cord. Failure to follow these instructions can result in death or electrical shock.

The CGTH-Series heater requires a grounded three-prong electrical outlet to be installed within 18" of the rear surface of the heater’s burner box. It is recommended that the outlet for the heater be ceiling-mounted and should be on a dedicated circuit. **DO NOT** use an electrical extension cord to operate the heater.

**Heater Rating:** 120 VAC, 60 Hz, 1 Ø, 1 A

4.3.1 Grounding

The heater must be electrically grounded in accordance with the following codes: United States: Refer to National Electrical Code, ANSI/NFPA-70 - latest revision. Wiring must conform to the most current National Electrical Code and local ordinances. Canada: Refer to Canadian Electrical Code, CSA C22.1 Part 1 - latest revision.

4.3.2 Thermostat

It is important to note that the CGTH-Series heater is controlled by a low voltage (24V AC) thermostat supplied with the heater. The control transformer located inside the burner supplies the necessary electrical power to operate the thermostat. No other electrical power to the thermostat is required.
4.4 Venting Requirements
The CGTH-Series heater must be installed with the venting system supplied or with the optional venting kit available from Roberts-Gordon. DO NOT connect this heater to a separate chimney, and do not common vent with any other fuel burning appliance.
The CGTH-Series heater employs a balanced flue/air venting duct system and must conform to the following length requirements:
- Maximum Length: 10' (3 m)
- Minimum Length: 2' - 6" (.76 m)
- Maximum Elbows: Two with natural gas units, one with propane gas units

4.4.1 Venting Codes

**WARNING**

- Carbon Monoxide Hazard
  - Heater must be exhausted outside. Use materials supplied.
  - This heater needs fresh air for safe operation and must be installed so there are provisions for adequate combustion and ventilation air.
  - Failure to follow these instructions can result in death or injury.

The location, size, installation and termination of vents, as well as the required safe distances from combustibles when penetrating combustible walls, must comply with local codes and recommendations of the local gas company. United States: Refer to National Fuel Gas Code, ANSI Z223.1 - latest revision (same as NFPA 54). Canada: Refer to CSA B149.1 Natural Gas ans Propane Installation Code.

4.4.2 Balanced Flue Construction
The balanced flue consists of a 3" (8 cm) diameter flue which is concentrically positioned inside a 5" (12.5 cm) diameter vent pipe (See Figure 2). The 5" (12.5 cm) diameter vent supplies outside air for combustion while the 3" (8 cm) diameter flue carries the products of combustion from the heater.
The balanced flue is applicable for both horizontal and vertical venting arrangements. Vertical venting will require the optional roof venting kit available from Roberts-Gordon.

4.5 Non-Residential Installations
4.5.1 Aircraft Hangars
The CGTH-Series heater may be used in certain areas of aircraft hangars. Installation in aircraft hangars must be in accordance with the following codes: United States: Refer to Standard for Aircraft Hangars, ANSI/ NFPA-409 - latest revision. Canada: Refer to Standard CSA B149.1 Natural Gas ans Propane Installation Code.
- Heaters in aircraft storage or service areas must be installed a minimum of 10' (3 m) above the upper surface of wings or engine enclosures of the highest aircraft which may be housed in the hangar. (This should be measured from the bottom of the heater to the top of the wing, or engine enclosure, whichever is highest from the floor).
- In other sections of aircraft hangars, such as shops or offices, heaters must be installed a minimum of 8' (2.4 m) above the floor.
- Heaters installed in aircraft hangars shall be located so as not to be subject to damage by aircraft, cranes, movable scaffolding or other objects.
- When installed over hoists, the required safe distances from combustibles must be maintained from the uppermost point of the combustible materials placed on the hoist.

4.5.2 Public Garages
The CGTH-Series heater may be used in public garages. Installation in public garages must be in accordance with the following codes: United States: Standard for Parking Structures NFPA-88A - latest revision or the Code for Motor Fuel Dispensing Facilities and Repair Garages, NFPA-30A - latest revision. Canada: Refer to CSA B149.1 Natural Gas ans Propane Installation Code.
- Heaters must be installed a minimum of 8' (2.4 m) above the floor. Required safe distances to combus-
Combustibles must be maintained from vehicles parked below the heater.

- When installed over hoists, the required safe distances from combustibles must be maintained from the uppermost point of the combustible materials placed on the hoist.

### 4.5.3 Hazardous Locations

Where there is the possibility of exposure to combustible airborne material or vapor, consult the local Fire Marshal, the Fire Insurance Carrier or other authorities for approval of the proposed installation.

### 4.6 Heater Location

It is the Installer's Responsibility to choose a suitable mounting location for the heater. The Installer must follow the guidelines below as stated in the Installation Manual. Before using your heater, check the location. If the location does not follow these guidelines, do not use the heater. Immediately contact your installer.

- The heater must meet the minimum mounting height requirement of 7' (2.1 m) above the floor. For aircraft hangars and public garages, the heater must meet the minimum mounting height requirement of 8' (2.4 m) above the floor.

- The proposed mounting location allows for the required safe distances from combustibles such as vehicles, wood, gasoline and flammable objects, liquids and vapors.

- The proposed location of the heater will not restrict motion of passageway doors or windows.

- The proposed location will not interfere with operation of the overhead garage door, or allow the door to enter the required safe distances from combustibles.

- The proposed location will provide the best coverage of the total area to be heated.

- Consideration be given to the types of vehicles that will be parked in the garage (cars, vans, boats, RV's, etc.).

- The proposed location will allow for the required safe distances from combustibles with respect to the vehicles parked in the garage.

- The proposed location will allow the required utilities (i.e.: gas and electric) and venting to be installed (maximum vent length is 10' [3 m]).

- Sufficient clearances will exist to allow for easy access to the service door.

- Overhead structural members (rafters, beams, etc.) are accessible for attaching the heater.
SECTION 5: USING THE HEATER

5.1 Required Safe Distances from Combustibles

Once your heater is installed by a licensed contractor, you must remember to maintain the required safe distances from combustibles at all times. Combustibles are materials which may catch fire and include many common items such as your vehicle, wood and wood shavings, paper, rubber, fabrics, etc. Don't forget these materials could be in the form of liquids and vapors or may be airborne.

Combustible materials such as those noted, and any other combustible materials, must not be placed closer to any base or side of the CGTH-Series heater than the distances noted in the diagrams on the following page. If you have any questions about the required safe distances from combustibles, or the associated diagrams, please contact your installer, ROBERTS GORDON® independent distributor, or Roberts-Gordon at 716.852.4400 or 1.800.828.7450 during normal business hours which are Monday through Friday, 8:15 a.m. to 4:45 p.m., Eastern Time.

For owner safety, a thermostat tag is supplied with the CGTH-Series as a permanent reminder of the importance of maintaining the required safe distances from combustibles. Instructions for installing the tag are located in the Installation, Operation and Service manual. Immediately contact your ROBERTS GORDON® independent distributor or Roberts-Gordon if the tag is missing.

It is important to keep the required safe distances from combustibles at all times. Clearances from vehicles parked beneath heaters must be maintained. The thermostat tag (included with the heater) must be posted to identify any possible violation of the clearance distances from the heater in vehicle areas. Maximum allowable stacking height in storage areas should be identified with signs or appropriate markings. See Page 10, Figure 4 and Figure 5 for the required safe distances from combustibles.

The warnings on this page appear on the heater and are also on the thermostat tag to serve as a constant reminder to maintain the required safe distances from combustibles at all times. If you do not have either the label on your heater or the thermostat tag, immediately call your installer or Roberts-Gordon for replacement.

FIGURE 3: Thermostat Tag

![Thermostat Tag Diagram]
Your heater may be installed in one of three ways: horizontal, 45° tilt left or 45° tilt right. Since the distances for the tilt installation are the same, the chart only shows one (the 45° tilt left). To determine the minimum required safe distances for your heater, you must know the mounting type and model number of your heater.

**FIGURE 4: Horizontal Installation**

*All dimensions are from the reflector.

**NOTE:** All dimensions indicate the required safe distances from combustibles, dimension "C" and "E" DO NOT indicate the required mounting height. The minimum mounting height is 7' (2.1 m), except for aircraft hangars and public garages. *(See Page 7, Sections 4.5.1 and 4.5.2.)*

Flue clearances from combustibles are zero. It is not necessary to provide additional clearance on penetrations through the wall or roof.

Know your model number. Model number is found on the rating tag.

- Do not touch the heater
- Keep all persons, especially children, away from the heater.
- Use of protective grille (included with select models) is recommended.

A protective grille is included with select models of the CGTH-Series heater. This grille is supplied in sections and must be installed on the underside of the reflector prior to operation.

The Model CGTH-30 heater is 8' (2.5 m) long and requires installation of two protective grille sections and one grille endcap, while the Models CGTH-40 and CGTH-50 are 11' 6" (3.5 m) long and require three protective grille sections and one grille endcap.

One grille has a formed end panel and is installed at the end of the reflector that is furthest from the burner box. The other grille has an open-end and is installed closest to the burner box.

To purchase the protective grille for your heater, please contact your installer.

FIGURE 7: Reflector and Grille
5.3 Rear Movable Hanger Limits

*Figure 8* shows a typical installation of the CGTH-Series heater. The drawing specifies the allowable range of distance between the front fixed hanger and the rear movable hanger.

The rear hangar should only be moved if the distance between both hangers is not within the allowable range.

FOR YOUR SAFETY READ BEFORE OPERATING

**FOR YOUR SAFETY**

*If you smell gas:*
1. Open windows.
2. DO NOT try to light any appliance.
3. DO NOT use electrical switches.
4. DO NOT use any telephone in your building.
5. Leave the building.
6. Immediately call your local gas supplier after leaving the building.
   Follow the gas supplier’s instructions.
7. If you cannot reach your gas supplier, call the Fire Department.

**WARNING**

Fire Hazard
Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

Some objects will catch fire or explode when placed close to heater.

Failure to follow these instructions can result in death, injury or property damage.

1. This appliance does not have a pilot. It is equipped with an ignition device which automatically lights the burner. DO NOT try to light the burner by hand.

2. BEFORE OPERATING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

3. Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, don’t try to repair it, call a qualified service technician. Force or attempted repair may result in a fire or explosion.

4. DO NOT use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and replace any part of the control system and any gas control which has been under water.

5.5 To Turn Off Gas To Heater
1. Set the thermostat to the lowest setting.

5.4 Operating Instructions.

**WARNING**

Electrical Shock Hazard
Plug heater into grounded three-prong ceiling receptacle.
Do not cut or remove the grounding prong from this plug.
Do not use with an extension cord.
Failure to follow these instructions can result in death or electrical shock.

STOP! Read the safety information above.
1. Set the thermostat to the lowest setting.
2. Turn off all electric power to the heater.
3. Do not try to light the burner by hand.
4. Turn off the manual gas valve in the heater supply line.

5. Wait five (5) minutes to clear out any gas. If you then smell gas, STOP! If you do not smell gas, go to the next step.

6. Open the manual gas valve in the heater supply line.

7. Turn on electric power to the heater.
8. Set the thermostat to the desired setting.
9. If the heater will not operate, See Section 5.5 and call your service technician or gas supplier.
2. Turn off all electric power to the heater if service is to be performed.
3. Turn off the manual gas valve in the heater supply line.

5.6 Sequence of Operation
1. When the thermostat calls for heat, the blower motor will energize.
2. When the motor approaches nominal running speed, the pressure switch closes and activates the ignition module which in turn initiates the purge.
3. The ignition module then energizes the spark igniter.
4. When sparking begins, the gas valve is energized.
5. If a flame is detected, the gas valve remains open. When the call for heat is satisfied, the system control mechanism de-energizes and the gas valve is turned off.
6. If no flame is detected, the gas valve is closed, and a purge period begins. After the purge period, the ignition module energizes the spark igniter and the gas valve. If a flame is still not established, a third and final purge/ignition sequence is begun. After three failed attempts, the system control mechanism will lock out for a period of one hour or until the unit is reset.
7. Reset is accomplished by removing power from the heater for at least five seconds.
8. With a three-try module, when the flame is established and then lost on the first or second trial, the gas valve will automatically turn off. A purge and trial for ignition will then occur.

5.7 Venting
As mentioned on Page 5, Section 3.7, it is the Installer’s Responsibility to properly vent (exhaust) the heater outside. Please make sure your heater is vented. If it is not vented, do not use the heater. Immediately call your installer.

Your heater may be vented in one of three ways: horizontal through the wall, horizontal with an elbow through the wall or vertical through the roof. You should know the way your heater is vented. Refer to the following drawings to determine the type of venting you have. If you are not sure, please contact your installer.

**WARNING**

Carbon Monoxide Hazard
Heater must be exhausted outside. Use materials supplied.
This heater needs fresh air for safe operation and must be installed so there are provisions for adequate combustion and ventilation air. Failure to follow these instructions can result in death or injury.

SECTION 6: CARING FOR THE HEATER

To ensure your safety and years of trouble-free operation of the heater, inspections by both the contractor and owner are essential.

6.1 Annual Inspection

Before every heating season, a licensed contractor must perform a thorough inspection of the heater. Electrical, electrical and thermostat connections as well as the venting and suspensions are some of the areas requiring inspection.

6.2 Monthly Inspection

The owner must visually inspect the heater each month using the checklist on Page 18, Section 6.3. Check only the items on this list and follow the instructions given.

6.3 Maintenance Checklist

<table>

**Installation Code and Annual Inspections:**

All installations and service of ROBERTS GORDON® products must be performed by a contractor qualified in the installation and service of products sold and supplied by Roberts-Gordon and conform to all requirements set forth in the ROBERTS GORDON® manuals and all applicable governmental authorities pertaining to the installation, service and operation of the equipment.

To help facilitate optimum performance and safety, Roberts-Gordon recommends that a qualified contractor annually inspect your ROBERTS GORDON® products and perform service where necessary, using only replacement parts sold and supplied by Roberts-Gordon LLC.

| **The Vicinity of the Heater** | Do not store or use flammable objects, liquids or vapors near the heater. Immediately remove these items if they are present. Keep the heater clear of clothing, furniture, draperies or other combustible materials. Children and adults should be alerted to the hazards of high surface temperatures and should stay away to avoid burns and clothing ignition. Young children should be carefully supervised when they are in the same room as the heater. |
| **Vehicles and Other Objects** | Maintain the clearances to combustibles. Do not hang anything from, or place anything on, the heater. Make sure nothing is lodged underneath the reflector, in between the tubes or in the decorative or protective grilles (included with select models). Immediately remove objects in violation of the clearances to combustibles. |
| **Power Cord** | There should be no exposed wire on the cord or damage on the plug. |
| **Inside Venting** | Venting must be intact. Using a flashlight, look for obstructions, cracks on the pipe, gaps in the sealed areas or corrosion. The area must be free of dirt and dust. Remove any carbon deposits or scale using a wire brush. |
| **Outside Air Inlet** | Inlet must be intact. Look for obstructions, cracks on the pipe, gaps in the sealed areas or corrosion. The area must be free of dirt and dust. Clean and reinstall as required. |
| **Tubes** | Make sure there are no cracks. Contact a licensed contractor for repair. |
| **Gas Line** | Contact a licensed contractor for repair. |
6.4 Basic Heater Care

- Make sure the heater is off and cool. Dust the burner, reflector and control compartment off with a dry cloth. Increase cleaning frequency if the heater is in an area where excessive dirt, dust or lint material etc. can build up.
- Do not use the heater in an area containing corrosive chemicals.
- Do not install or use the heater outdoors.
- Do not use the heater if any part has been under water. Immediately call a licensed contractor to inspect the heater and to replace any part of the control system which has been under water.
- Do not paint any part of the heater.

6.5 Replacement Parts

Use only genuine ROBERTS GORDON® replacement parts.
Use of parts not specified by Roberts-Gordon voids the warranty.
SECTION 7: THE ROBERTS GORDON® CARIBE® LIMITED WARRANTY

ROBERTS-GORDON WILL PAY FOR:
Within 42 months from date of shipment from Roberts-Gordon, replacement parts will be provided free of charge for any part of the product which fails due to a manufacturing or material defect. Roberts-Gordon will, at its sole discretion, repair or replace after determining the nature of the defect and disposition of part in question.

ROBERTS GORDON® Replacement Parts are warranted for a period of 18 months from date of shipment from Roberts-Gordon or the remaining ROBERTS GORDON® CARIBE® warranty.

ROBERTS-GORDON WILL NOT PAY FOR:
Service trips, service calls and labor charges.
Shipment of replacement parts.
Claims where the total price of the goods have not been paid.
Damage due to:
• Improper installation, operation or maintenance.
• Misuse, abuse, neglect, or modification of the ROBERTS GORDON® CARIBE® in any way.
• Use of the ROBERTS GORDON® CARIBE® for other than its intended purpose.
• Incorrect gas or electrical supply, accident, fire, floods, acts of God, war, terrorism, or other casualty.
• Improper service, use of replacement parts or accessories not specified by Roberts-Gordon.
• Failure to install or maintain the ROBERTS GORDON® CARIBE® as directed in the Installation, Operation and Service manual.
• Relocation of the ROBERTS GORDON® CARIBE® after initial installation.
• The use of the ROBERTS GORDON® CARIBE® in a corrosive atmosphere containing contaminants.
• The use of the ROBERTS GORDON® CARIBE® in the vicinity of a combustible or explosive material.
• Any defect in the ROBERTS GORDON® CARIBE® arising from a drawing, design, or specification supplied by or on behalf of the consumer.
• Damage incurred during shipment. Claim must be filed with carrier.

WARRANTY IS VOID IF:
The ROBERTS GORDON® CARIBE® is not installed by an electrician qualified in the installation and service of control systems for heating equipment.
You cannot prove original purchase date and required annual maintenance history.
The data plate and/or serial number are removed, defaced, modified or altered in any way.

The ownership of the ROBERTS GORDON® CARIBE® is moved or transferred. This warranty is nontransferable.
Roberts-Gordon is not permitted to inspect the damaged controller and/or component parts.

READ YOUR INSTALLATION, OPERATION AND SERVICE MANUAL
If you have questions about your controller, contact your installing professional. Should you need Replacement Parts or have additional questions, call or write Roberts-Gordon:

Roberts-Gordon’s liability, and your exclusive remedy, under this warranty or any implied warranty (including the implied warranties of merchantability and fitness for a particular purpose) is limited to providing replacement parts during the term of this warranty. Some jurisdictions do not allow limitations on how long an implied warranty lasts, so this limitation may not apply to you. There are no rights, warranties or conditions, expressed or implied, statutory or otherwise, other than those contained in this warranty.

Roberts-Gordon shall in no event be responsible for incidental or consequential damages or incur liability for damages in excess of the amount paid by you for the ROBERTS GORDON® CARIBE®. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so this limitation or exclusion may not apply to you. This warranty gives you specific legal rights, and you may also have other rights which vary from jurisdiction to jurisdiction.

Roberts-Gordon shall not be responsible for failure to perform under the terms of this warranty if caused by circumstances out of its control, including but not limited to war, fire, flood, strike, government or court orders, acts of God, terrorism, unavailability of supplies, parts or power. No person is authorized to assume for Roberts-Gordon any other warranty, obligation or liability.

LIMITATIONS ON AUTHORITY OF REPRESENTATIVES:
No representative of Roberts-Gordon, other than an Executive Officer, has authority to change or extend these provisions. Changes or extensions shall be binding only if confirmed in writing by Roberts-Gordon’s duly authorized Executive Officer.
