Extend Your Patio Season with VANTAGE® HEM Patio Heater!

Continue enjoying the outdoors even when the temperature drops! Keep your patio open and customers comfortable with the VANTAGE® Harsh-Environment Modulating infrared patio heater.

Infrared heat bathes customers in warmth keeping them comfortable and extending their stay well into the colder season. However, during milder days infrared heaters may provide too much heat which can drive customers away.

We have the solution!

Most infrared patio heaters are either on or off which can create a big swing in temperature on milder days. The VANTAGE® Harsh-Environment Modulating patio heater provides a solution to this issue. Through modulation, users have the ability to manually or automatically adjust the heater's output, keeping the patio comfortable by providing the right amount of heat, despite cooler or even milder temperatures. By keeping your customers comfortable, this unique feature will extend your patio season.

Durability and Energy Efficiency

Approved for outdoor installations and built to withstand all weather conditions, the VANTAGE® Harsh-Environment Modulating infrared heater provides a permanent, long-lasting, energy efficient heating solution.

Easy-To-Use Control Options

Our new Patio Heater Control provides users with the ability to manually adjust the heat output of the VANTAGE® Harsh-Environment Modulating patio heater. This allows users to fine tune space conditions to maximize comfort levels.

- Maintain comfort levels and extend your patio season through modulation
- Reduce maintenance and operation costs with high-quality, efficient heating equipment
- Handle whatever Mother Nature throws at you with durable, long-lasting components
- Convenient, permanent solution located up and out of the way, allowing more room for customers
